

# Agricultural Water Safety Workshop

Small Farms Conference | ONLINE

[Register Here](#)

Walk through FDA Produce Safety Rule (PSR) Agricultural Water regulation compliance step by step, including:

- How to create your water profile
- How to treat water that isn't compliant
- What to expect from inspections

## BACKGROUND

The water quality requirements in the PSR apply to farms that

- Are covered by the rule and
- That use water in direct contact with the harvestable part of the covered crop or food contact surfaces.

All specialty crop producers are welcome to attend to learn about ways to prevent food-borne illness caused by contaminated water.

The PSR requires that *"all agricultural water must be safe and of adequate sanitary quality for its intended use"* (§ 112.41).

Learn more about science-based food safety and whether your farm is subject to inspection on the [Utah Produce Safety Web site](#).
